# AIRnet Installation Instructions

## Notice A: ISO 8573-1:2010

AIRnet fulfills the requirements of ISO 8573-1:2010 (1:2:0) provided that:

- A system purge is executed with compressed air after the installation, for at least 24 hours
- A properly sized certified point of use particle filter is used
- Only NSF approved lubricant 2810 0248 00 is used
- Class 0 valves are used
- The inlet air of the AIRnet piping system fulfills the requirements of ISO8573-1:2010 (1:2:0).

Without a point of use filter installed, AIRnet fulfills ISO 8573-1:2010 (2.2.0). AIRnet ball valves and butterfly valves are excluded from the certificate. When applicable, always check the compatibility of AIRnet components with the applied cleaning processes.

## Notice B: Certified Installer

At AIRnet, we take pride in the quality and safety of our products. That's why we require that all installations are carried out by a certified installer, who is highly trained and equipped to handle all aspects of the installation process.

## Notice C: Complete Comprehension

This comprehensive manual must be thoroughly read in its entirety in order to have a complete understanding of the AIRnet assembly process.

# Operating Conditions

## Operating Conditions

AIRnet pipes and fittings are designed to convey compressed air and vacuum. The system can also be used for nitrogen, helium, argon, neon, xenon and krypton.

AIRnet system can only be used to convey compressed air, Vacuum & inert gases and the allowed medium can be in direct contact with the final product and process. However, AIRnet system cannot be used for conveying the finished products, for example, chemicals, food products, cement etc.

AIRnet pipes and fittings must only be used within the pressure and temperature specifications referred to in the AIRnet Product Information Sheet.

AIRnet fittings are sensitive to direct UV radiation. In case of direct exposure, shield the fittings.

AIRnet pipes and fittings should be protected against rain, snow, and guano.

AIRnet system must be appropriately protected against violent impacts.

AIRnet pipes and fittings are not suitable for direct contact with soil. A watertight PVC pipe suited for underground or outside installations can be installed around the AIRnet pipe.

AIRnet aluminium supports pressure dewpoints up to  $-40^{\circ}\text{C}$  and is expected to be operated in C3 and below corrosivity categories according to EN ISO 12944-2.

AIRnet pipes and fittings should not be used as support for electrical equipment, cables or earth conductors.

AIRnet pipes should never be connected directly to a source of vibrations (in these cases, use hoses instead).

Ensure accessibility of the AIRnet system for possible future expansion or maintenance.

Pressure relief valves must be installed where needed to guarantee that the working pressure cannot exceed the maximum working pressure of the AIRnet system.

## AIRnet installations in explosive environments

AIRnet fittings are non-conductive and must be bonded with an electric wire (except the D158 / 6" equal socket and the D100 / 4" equal socket). Please refer to page 39 for more information.

AIRnet installations in explosive environments must always be earthed.

AIRnet bonding and the earthing must be checked at frequent intervals to secure that the system cannot be electrically charged.

Cutting, deburring and assembly of AIRnet pipes may create sparks. Necessary precautions in explosive atmospheres must be taken.

# Safety Instructions

## Safety Instructions

AIRnet is not meant to bear weight beside its own weight. Heavier accessories incorporated into the AIRnet system (like filters or valves) need proper supporting.

Do not disassemble the inner parts of the nuts of the AIRnet fittings.

Do not use any other brand fittings or pipes in combination with AIRnet aluminum products.

There are AIRnet parts in the portfolio to interconnect with other piping systems using standard threaded (ISO, NPT) or flange connectors (DIN, ANSI).

Please consider the potential galvanic corrosion when combining parts with different material.

Before any installation, adjustment, repair work or other non-routine checks, relieve the AIRnet system of pressure and effectively isolate the system from all sources of pressure.

Installation, adjustments and repair work of an AIRnet system must be strictly in line with the instruction guides given in this installation manual.

Installers must use the necessary protection means (PPEs). When working at heights, use a harness for personal protection, and ensure that tools are securely fastened to prevent them from falling.

Installers must comply to all local safety requirements related to the application(s) in scope. Special care must always be taken to prevent suffocation risks when working with other gases than air.

Please conduct an LMRA (last minute risk assessment) before commencing an AIRnet installation.

Only genuine AIRnet fittings and tools should be used when installing, adjusting or repairing an AIRnet system.

All plugs and caps must be removed before installing the AIRnet pipes.

Check the surface of the AIRnet pipes before installing. There should be no scratches, abrasions, dents, burs, etc.

Use only solvents or chemicals which do not damage the materials of AIRnet. Please consult page number 14 in this document. If in doubt, contact your AIRnet rep if you need more information about compatible cleaning agents.

Before using the AIRnet system, installers must ensure that all necessary test controls and applicable rules for the specific installation are complied with local site conditions.

Never use damaged AIRnet fittings or tools.

## AIRnet aluminium Product Information

AIRnet is a reusable aluminum piping system\* designed in line with EN 13480-3 to deliver a fast, easy, and reliable distribution network for Compressed Air, Vacuum, Nitrogen, Helium, Argon, Neon, Xenon and Krypton. AIRnet technologies and innovations are based on technical expertise gained from more than 140 years of experience with pressurized air applications and equipment.

### PIPES

20 (¾") - 25 (1") - 40 (1 ½") - 50 (2") - 63 (2 ½") - 80 (3") - 100 (4") - 158 (6") mm

<b>Applications</b>	Compressed Air and Vacuum	EN standard
<b>Additional Gasses</b>	Nitrogen, Helium, Argon, Neon, Xenon and Krypton	
<b>Material</b>	Extruded aluminum alloy EN AW-6060 T6 (similar to alloy 6063T5)	EN 755-2 (ASTM B241)
<b>Safety factor</b>	64bar - 4x MAWP for all diameters (burst pressure)	(according to ASME B31.1)
<b>Working pressure</b>	Max 16 bar(g) (Max 232 psig) (D158: max 13 bar (188 psig) acc. ASME B31.1)	
<b>Working temperature</b>	-20°C to 80°C (-4°F to 176°F)	
<b>Vacuum level</b>	13 mbar(a) (0.189 psia)	
<b>Dewpoint</b>	Lowest allowable pressure dewpoint is -40°C (-40°F)	
<b>Outside treatment</b>	Polyester powder paint (according to QUALICOAT Standards)	
<b>Inside treatment</b>	Chrome free conversion treatment	
<b>Colors</b>	Blue RAL 5012, Green RAL 6018 and Grey RAL 7001	

\* Except for Black Series system, please refer to page 24.

### PF SERIES FITTINGS

20 (¾") - 25 (1") - 40 (1 ½") - 50 (2") mm

<b>Connection</b>	Push to fit technology	EN standard
<b>Materials</b>	Engineered polymer PA6 - GF30 fiberglass reinforcement Aluminum high pressure die casting EN AC-46100 (Similar to A03830) Wrought aluminum alloy EN AW-6026 (Similar to alloy 6082)	EN 1706 (ASTM B85) EN 755-2 (ASTM B221)
<b>Seal fittings</b>	NBR 70 Sh A (PTFE coating on pipe seal)	EN 755-2 (ASTM B241)

### PM SERIES FITTINGS

63 (2 ½") - 80 (3") mm

<b>Connection</b>	Torque to grip technology, pre marked	EN standard
<b>Materials</b>	Aluminum high pressure die casting EN AC-43400 (similar to A360) Wrought aluminum alloy 6082	ASTM B85 / EN 1706 ASTM B221
<b>Seal fittings</b>	NBR 70 Sh A	

### BIGGER DIAMETERS FITTINGS

100 (4") - 158 (6") mm

<b>Connection</b>	Bolt clamp technology	EN standard
<b>Materials</b>	Aluminum permanent mold casting EN AC-43100 (Similar to A13600) Stainless Steel EN 1.4301 (Similar to alloy 304)	EN 1706 (ASTM B85) EN 10088-2 (AISI 304)
<b>Seal fittings</b>	NBR 70 Sh A	

## QUICKDROPS FITTINGS

100 (4") - 158 (6") mm

<b>Connection</b>	Bolt clamp technology Torque to grip technology	EN Standard
<b>Materials</b>	Aluminium high pressure die casting EN AC-44500 (similar to A413) Engineered polymer PA6 - GF30 fiberglass reinforcement	EN 1706 (ASTM B85)
<b>Seal fittings</b>	NBR 70 Sh A (PTFE coating on pipe seal)	

## BLACK SERIES FITTINGS

63 (2 1/2") - 80 (3") mm

<b>Connection</b>	Torque to grip technology	EN standard
<b>Materials</b>	Aluminum high pressure die casting EN AC-46100 (Similar to A03830) Aluminum permanent mold casting EN AC-43100 (Similar to A13600) Wrought aluminum alloy EN AW-6026 (Similar to alloy 6082)	EN 1706 (ASTM B85) EN 1706 (ASTM B85) EN 755-2 (ASTM B221)
<b>Seal fittings</b>	NBR 70 Sh A	

Guarantee  
**10**  
years

## AIRnet is fast, easy to install and flexible for the future

Quickdrop design  
safeguards leaktight and  
condensate free droplines

### Time and tooling

- Quick connections with no need to crimp, thread, solder or glue the pipe
- No heavy tooling or machinery required
- PF series and PM series can be connected to any existing network via simple use of adaptor unions and nipple sockets
- PF series is assembled by hand, a push of the pipe into the fitting is all it takes

### Modularity

- Easy to handle and easy to work with lightweight materials
- Modular design supports extensions and modifications to meet new demands
- Components are interchangeable and reusable after disassembly
- Quickdrops are easily mounted, both horizontally and vertically

Durable and corrosion  
resistant materials

White torque indicators  
(PF Series)

## AIRnet is reliable, safe, and maintenance free

### Sustainability

- Optimized inner body design minimizes flow resistance and pressure drop in the fittings
- Low friction factor and seamless connections minimize pressure drops in the pipe network
- Superior sealing technology ensures a leak free system and maintains performance over time
- Durable and corrosion resistant materials offers a maintenance free system

### Safety

- Safety factor of 4 for all diameters (64 bar burst pressure)
- Camera control and automatic assembly guarantee zero defect manufacturing
- Plastic components and pipe clips comply to UL 94 HB and UL 94 V-2 for flammability
- Torque indicators ensure sufficient torquing

# LMRA (Last Minute Risk Assessment)

This checklist is a risk assessment to be performed on-site at the customer and must be preceded by a detailed risk assessment.

## General

### STEP 1: EVALUATION BEFORE THE START OF WORK

	YES	NO	N/A
Do I know what to do and how?			
Am I trained to do this kind of work?			
Is my work equipment suitable and in good condition / inspected?			
Do I have the necessary PPE, and do they offer appropriate protection?			
Do I have a work permit that allows me to start?			
Is my working environment free of slipping, tripping and/or falling hazards?			
Is my work environment sufficiently enlightened?			
Have I identified all energy sources and followed the Lock Out – Tag Out procedure?			
Do I know the VGM regulations of dangerous products that I am going to use?			
Is the atmosphere in and around my work environment safe? (confined space, explosion)			
Is the danger of falling objects excluded?			
Am I sufficiently protected against falls from height?			
Are the weather conditions good?			
Can I lift loads manually in an ergonomic way?			
Is my work environment defined?			
Is there regular supervision when I work in isolation?			
Am I aware of the risks of other activities in my work environment?			
Do I know the locations of first aid equipment (e.g. emergency shower, eyewash bottle)			
Do I know the locations of firefighting equipment (e.g.; extinguisher, reel)			
Do I know the alarm procedure and numbers in the event of a fire or accident?			
Do I know my escape route and evacuation site?			
Have I taken all measures to prevent environmental pollution?			

# LMRA (Last Minute Risk Assessment)

**AIRnet  
specific**

	YES	NO	N/A
Did I read and understand the installation manual for AIRnet - <a href="http://www.airnet-system.com">www.airnet-system.com</a>			
Is scaffolding and/or lifting equipment inspected and in good condition?			
Will the AIRnet system be installed within the limits of the product in terms of environment, pressure and temperature?			
Will the AIRnet system be used for the gasses mentioned in the technical datasheet OR has a written confirmation from the manufacturer been obtained that claims AIRnet can be used for this type of gas?			
Will the AIRnet system be properly earthed (electrically?)			
Did I check for any damage to the AIRnet material due to transport?			
Did I check if the tools used are in good condition and have been maintained as per requirement?			
Did I check if the right tools are available for carrying out the AIRnet installation?			

## STEP 2: MEASURES TO ELIMINATE OR REDUCE EXISTING RISKS TO AN ACCEPTABLE LEVEL

## STEP 3: PRESENT WHEN FORMATTING THIS LMRA

Name	Date	Signature

# Commissioning Report

All AIRnet commissioning has to be registered in the F3 app!

Go to <https://airnetinstructions.com/> to register your installation and get up-to-date information about AIRnet.

Commissioning data to be collected and submitted in the F3 app as shown below:

Certified installer:	Responsible AIRnet champion:
Customer:	Commissioning date (dd/mm/yyyy):
Customer address:	
<input type="checkbox"/> Expansion of existing installation	<input type="checkbox"/> New installation

## Before installation

### SAFETY

- ☐ All safety instructions at customer site have been acknowledged and applied.
- ☐ The AIRnet installation manual (latest version is available on the website: <https://www.airnet-system.com/en>) has been read and understood. The installation is carried out in accordance with the instructions in this manual.

### MEDIUM

- ☐ Compressed air
- ☐ Vacuum
- ☐ Nitrogen
- ☐ Other: \_\_\_\_\_

	T <sub>MAX</sub> _____ °C / °F
	T <sub>AVG</sub> _____ °C / °F
	T <sub>MIN</sub> _____ °C / °F
	Working pressure _____ bar(g) / psi

### AMBIENT CONDITIONS

If installed outdoors: is the installation protected from

- ☐ Direct sunlight?
- ☐ Rain / snow / ice?
- ☐ Wind?

### NETWORK LAYOUT

- ☐ To ensure proper draining of condensate, pipes should be sloped at 1-2% and a drain point should be foreseen at every lowest point of the line.
- ☐ Ensure that pressure vessels are bolted to the floor, and that vibrations may not be transmitted to the AIRnet piping.
- ☐ Expansion loops  
Number of expansion loops: \_\_\_\_\_  
Longest straight line: \_\_\_\_\_ m/ft

## Installation

A pipe clip has been foreseen within 50cm (20") of every side of every fitting

☐ AND

A pipe clip has been foreseen every 2,5m (100") for longer stretches of pipe

# Commissioning Report

- ☐ All valves and flanges are supported by 2 pipe clips and a dedicated valve support

- ☐ Torque markers have been verified on at least 10% of fittings.
- For PF series 20mm (¾") to 50mm (2")
  - For PM series 63mm (2 ½") and 80mm (3")
  - For Bigger diameters 100mm (4") and 158mm (6").

- ☐ Insertion depth markers have been checked on at least 10% of fittings

## Black Series

- ☐ Verify torque by re-torquing all fittings with the torque wrench and corresponding head.
- For Black series 63mm (2 ½") and 80mm (3").

## Commissioning

- ☐ The installation has been tested according to the procedure below
1. Apply pressure of 1,5 bar / 22 psi to the system.
  2. Check if the pressure is dropping between the end of the line and the vessel. If pressure remains stable, go to point 4.
  3. Use leak finder spray or an ultrasonic leak detector to find the leak. Depressurize the system, rectify the leak and go back to step 1.
  4. Increase pressure gradually (max 1 bar / 14 psi every 5 minutes)
  5. Close the main valve and monitor the pressure at the end of the line for 30 minutes. If the pressure is dropping, go to point 3.
  6. To be checked: 24h before handover

Leaks / disconnections detected during first pressurization at 1,5 bar / 22 psi

- ☐ No
- ☐ Yes, \_\_\_\_\_ leaks found
- ☐ Yes, \_\_\_\_\_ disconnections

Leaks / disconnections detected during final pressurization at working pressure

- ☐ No
- ☐ Yes, \_\_\_\_\_ leaks found
- ☐ Yes, \_\_\_\_\_ disconnections

- ☐ The pressure difference between the compressor room and final point of use is approved by the customer.

<b>Cleaning (components)</b>				
surfactants (detergents in general)		Good	Unknown	Good
Ethylene diamine tetracetic acid (EDTA)		Unknown	Unknown	Good

# Expansion loops

Long straight pipes will expand or contract due to temperature variations. To compensate for this effect, expansion loops are required. The number of expansion loops depends on the total length of the straight line and the maximum temperature variation. An expansion loop is a U-shaped construction that compensates the variation in length.

The below table clarifies the maximum possible straight distance vs. the temperature variation. When the length of the straight line exceeds the maximum, expansion loops are required to compensate for the variation in length.

	Ø20 mm / ¾"	Ø25 mm / 1"	Ø40 mm / 1½"	Ø50 mm / 2"	Ø63 mm / 2½"	Ø80 mm / 3"	Ø100 mm / 4"	Ø158 mm / 6"
H	1.5 m / 4.9 ft		2 m / 6.6 ft					
W	0.75 m / 2.5 ft		1 m / 3.3 ft					
Δt	Maximum distance between two expansion joints							
5°C / 9°F	211 m / 692 ft	168 m / 551 ft	187 m / 614 ft	150 m / 492 ft	119 m / 390 ft	94 m / 308 ft	75 m / 247 ft	47 m / 154 ft
10°C / 18°F	159 m / 522 ft	127 m / 417 ft	141 m / 463 ft	113 m / 371 ft	90 m / 295 ft	71 m / 233 ft	57 m / 186 ft	36 m / 118 ft
20°C / 36°F	107 m / 351 ft	85 m / 279 ft	95 m / 312 ft	76 m / 249 ft	60 m / 197 ft	47 m / 154 ft	38 m / 123 ft	24 m / 79 ft
30°C / 54°F	80 m / 262 ft	64 m / 210 ft	71 m / 233 ft	57 m / 187 ft	45 m / 148 ft	36 m / 118 ft	29 m / 94 ft	18 m / 59 ft
40°C / 72°F	64 m / 210 ft	52 m / 171 ft	57 m / 187 ft	45 m / 148 ft	36 m / 118 ft	29 m / 95 ft	23 m / 76 ft	14 m / 46 ft

When using flexibles instead of rigid pipes as expansion loops, any length of flexible can be used.

# Installation

## Pipe Clips Installation Diameters 20 - 158 mm / 3/4" - 6"

### Rule #1

Every side of a fitting should have minimum 1 pipe clip within a distance of max 0.5 m / 20"

Make sure the piping system is rigidly supported to the structure of the building so that movement due to external forces (e.g. wind) are prevented.

### Rule #2

Maximum 2.5 m / 8 ft between 2 pipe clips

# Installation - PF Series Diameters 20 - 50 mm / 3/4" - 2"

# Installation - PM Series

## Diameters 63 - 80 mm / 2 1/2" - 3"

### Difference between Black Series and pm Series

Black Series	Pre-Marked (PM) Series
Torque at 50 Nm	Torque till marking
Insertion depth $\varnothing$ 63 / 2 1/2": 78 mm	Insertion depth $\varnothing$ 63 / 2 1/2": 73 mm ( $\Delta$ 5 mm)
Insertion depth $\varnothing$ 80 / 3": 97 mm	Insertion depth $\varnothing$ 80 / 3": 95 mm ( $\Delta$ 2 mm)
	Decreased risk of installation errors
	Safety screw on the nut
	Light weight
	Easy to assemble (pre-marked)

1 Measure

Length  $L = l + (2 \times S)$

Length (l)

S

$\varnothing$	S
63 mm / 2 1/2"	73 mm
80 mm / 3"	95 mm

2 Cut
